## Course Overview

Dealing with large projects can be daunting through the whole project lifecycle. In this course, Microsoft Project, you will learn foundational knowledge of defining and creating a project, resources, assignments, as well as tracking and reporting. First, you will learn how to create a work breakdown structure, link tasks and then display and print the project's Critical Path. Next, you will discover the different resource types and how these, and costs, can be assigned to the project. Finally, you will explore how to formally close the project and create a template from the existing schedule. When you are finished with this course, you will have the skills and knowledge of Microsoft Project needed to use the Agile capabilities in the subscription version of Project, and how to print and communicate different aspects of the project plan using custom and pre-defined reports.

The course is peppered with best practices and examples, which will take your knowledge to the next level to make you a project superstar. Some of the major topics that we will cover include creating the task list and dependencies.

Assigning resource is and costs updating on tracking the project and producing great looking project reports
